

In an effort to address concerns about COVID-19, the University is asking everyone to do their part in keeping shared living areas clean.

FIRST, AND FOREMOST, PREVENT ILLNESS, PROTECTING YOURSELF AND OTHERS:

cdc.gov/coronavirus/2019-ncov/about/prevention.html

- Frequent handwashing for at least 20 seconds with soap and water especially after touching any blister or sore, before preparing food and eating, and after using the toilet. cdc.gov/handwashing
- Clean your hands with an alcohol-based hand sanitizer that contains 60 to 95%alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
 Note: The use of soap and water hand washing is preferred over alcohol-based hand sanitizer.
- Avoid touching your eyes, nose, or mouth with unwashed hands.
- Avoid close contact (kissing, hugging, sharing utensils, etc.) with those who are sick.
- Keep those who are sick away from others until they are well.
- Cover mouth and nose with a tissue when sneezing or coughing.
- Properly dispose of used tissues and nappies into waste bins that close properly.
- Maintain general cleanliness.

DISINFECTION GUIDELINES FOR FRATERNITY AND SORORITY LIFE

NEXT, HELP KEEP OUR LIVING ENVIRONMENTS CLEAN:

Clean <u>AND</u> disinfect frequently touched surfaces daily. This includes tables, doorknobs, light switches, counter tops, handles, desks, phones, keyboards, toilets, faucets, and sinks.

- If surfaces are dirty, clean them: Use detergent or soap and water prior to disinfection.
- Use disinfectants appropriate for the surface. Options include:
 - Diluting household bleach. To make a bleach solution, mix: 5 tablespoons (1/3rd cup) bleach
 per gallon of water OR 4 teaspoons bleach per quart of water. Follow manufacturer's
 instructions for application and proper ventilation. Check to ensure the product is not past its
 expiration date. Never mix household bleach with ammonia or any other cleanser. Unexpired
 household bleach will be effective against coronaviruses when properly diluted.
 - Alcohol solutions. Ensure solution has at least 70% alcohol.
 - Other common EPA-registered household disinfectants. Products with EPA-approved emerging viral pathogens claims are expected to be effective against COVID-19 based on data for harder to kill viruses. Follow the manufacturer's instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).
- EPA's Registered Antimicrobial Products for Use Against Novel Coronavirus SARS-CoV-2, the Cause of COVID-19:
